

# D4Dairy – developing dairy farming through data & digitalization

Registration: <https://bit.ly/sahD4dairy>

15.09.2022

11-12 AM

With over 300 participating farms and more than 40 business and scientific partners, **D4Dairy** supports gaining knowledge about digital dairy farming from practice for practice. It's overall goal is **to provide decision support** to dairy management via a data-driven & networked information system, **exploiting the potential of advanced technologies and advanced data analysis** to further improve animal health, nutrition, animal welfare and product quality.

In this webinar **Dr. Christa Egger-Danner** (Consortium leader of D4Dairy) shows not only the potential of digital technologies for future dairy farming but also how businesses and technology providers benefit from digital networking across value-chain.
